

WatchDogST Helps Prevent Spills and Production Loss.

Problem Area

Violations of 40 CFR 112 also known as the "SPCC Rule" costs operators up to \$5,000 per day in fines. Production losses and field personnel's time costs the operator much more. The "SPCC Rule" states operators need a plan to **prevent** and **control** releases of produced liquids into the "Navigable Waters". "Navigable Waters" cover nearly any natural formation which contains or moves water.

Solution

Install **WatchDogST** a cost effective, self contained monitoring and alarm system. If the tanks get too high or the pumps go down the **WatchDogST** calls key personnel alerting them to the status of their critical operations via email, text message, telephone, mobile phone, or answering machine. With autodial capability the **WatchDogST** becomes the Prevention part of any SPCC plan. With early notification the **WatchDogST** facilitates Control and Countermeasure keeping you in compliance.

Benefits

Low cost and universal coverage makes the **WatchDogST** a versatile alarming platform. **WatchDogST** empowers field personnel to know the status of their production equipment at any time, from anywhere!!!
